

Damian Brathwaite

Damian is a fifty-eight-year-old new retiree with two kids and a loving wife. He lives with just his wife and loves seeing his children on holidays. He is waiting for the day he hears the news of a grandchild on the way. He loves to stay active and get out of the house as much as possible, believing that he will officially be old the day he stops moving. He lives close to the local mall and goes there to walk around with his wife and talk to the workers, telling everyone about his family and his famous niece. He attends a jazz dancing class on the weekends where he meets up with his friends George and Agüero to get exercise while telling jokes the whole time.

He likes to start every morning with two boiled eggs and a piece of French toast while looking out at the farms across the street from his house. He always sits and waits until his wife joins him so they can eat together while planning their day. Lunch is usually eaten later in the day after he returns from his mall trips or a visit to the grocery store. He likes to cook up something extravagant every day so he can try new things and find a productive way to use his newfound time.

Although he has been resisting his aging body, he has slowed down a lot from when he was younger. He lives close to a hospital and his family physician so he tries to go in for an assessment when he has any concerns. He also recently discovered an optometry and a dental clinic in the local mall that he uses for frequent checkups. They are much newer and he has never really been good at checking for emailed test results or logging into any of their online programs. He has a single computer in his house and it usually gathers dust since it is not used very often. He has also become very forgetful so he just prefers to stop by every medical clinic one by one to ask them to tell him his assessment results again. He enjoys talking to the doctors and the receptionist but as he gets older it becomes a bigger difficulty to stop by every time to ask for his updated results.

Jason Ha

33-year-old Optometrist, working in the Optomeye clinic for the last 6 years. He loves going to work where he works with one of his closest friends Tim where they both perform visual assessments on many patients every day. He likes going hiking with Tim in his free time and planning their next big annual Europe trip that they take every summer. He usually starts his days at 6 am since he needs to be at work by 8 am. He likes to listen to health and fitness podcasts on his one-hour commute to work. He owns a dog named Joey after the character from the TV show "Friends".

He likes to go to the gym on his way home from work three times a week to get some cardio. He prefers cycling in the gym and enjoys biking around his neighborhood and greeting all his neighbors in the warm weather seasons. He enjoys visiting his sister and his parents when he can especially because he enjoys his moms home cooked dumplings. He also loves to maintain his daily routines by starting every day with a shower and a black coffee with a quarter cup of milk and one teaspoon of sugar.

He went to optometry school at Nova Southeastern University in Florida and during his rotation in his final years, he worked at clinics in Los Angeles, New York, and Toronto. He always loved traveling and seeing new places but hated getting used to new medical management systems. Although he has always loved new technologies and has owned every version of the iPhone since its release, he has always resisted getting used to any software since they change too much. He prefers to delegate sorting and organizing patient files and results to the receptionists of the clinic to help speed up the process because he thinks it would take too much time to highly familiarize himself with the system. He would prefer patient files to be shown with their dates as the highest priority information, instead of reading over personal information about the patient which wastes valuable time.

Joe Doe

He is a forty-three-year-old married man with no children. He spends most of his time at work setting up and maintaining management programs for big and small businesses alike. He enjoys spending time at home with his wife and two dogs named Jack and Harley named after “Jack Daniels” the alcohol brand and “Harley Davidson” the motorcycle brand. On Tuesday and Thursday nights he likes to go on bike rides with his biker gang to a new bar to have a drink together. On the weekends and Friday nights, he likes to go to the local casino with his wife and play slot because he believes he will win big one day.

He mostly works from home and only wakes up early when he has to go into the office on Mondays which is when he buys a dark roast coffee from his local coffee shop before getting to work at 9 am. He usually eats leftovers from the previous night's dinner that was prepared by his wife or gets a burger with no tomatoes when he works at the office. He gets off of work at 8 pm and likes to head straight home after dealing with business executives all day. Since he spends so much time at work, he enjoys staying at home and doing nothing just as much as he likes spending time with his wife and friends. He hates to bring work talk outside of working hours and prefers to do things to take his mind off of his long hours.

He has worked in the software development industry for over two decades and has had a hand in building hundreds of programs. Although it has always been a challenge keeping up with the rapidly advancing field, he likes the challenge and opportunity to keep his work new and fresh with every unit of progress. He handles equal amounts of updates and changes as he does new projects. Management systems are his specialty but he always finds it interesting to add unique features and register databases for different companies. He mostly maintains software for big corporations nowadays and likes to hear back from clients on possible improvements that can be implemented. He has very little experience with the user experience of his software and believes many issues go overlooked when untargeted users opt to not use the software altogether instead of raising concerns.
